Everything
Road Map to the
Trifecta of Creativity
January 3rd, 2024

The Major Connection is between the Scan N Cut models listed above and the Stellaire and Luminaire Embroidery Machines listed above. When they are linked to each other through My Connection (red double arrow), features are unlocked in both machines:

The hundreds of cutting shapes in the Scan N Cut can be transferred to My Design Center in the Embroidery Machine and used as Artwork to create designs
.
Areas in embroidery designs can be automatically transformed into appliqué and those appliqué shapes can be sent to the Scan N Cut for cutting.

Disney Designs are NOT included for use in the above features.

Sew Many Creative Options

My Design Center in the Stellaire or Luminaire Embroidery machines allows the sewist to create designs within the machine without the use of extra software. Create embroidery designs using any combination of:

- Drawing directly on the screen
- Using built in shapes (My Connection adds hundreds of shapes)
- Tracing or Automatically Tracing an image using My Design Snap
- Using an outline of an embroidery design

Appliqué Generator in Stellaire or Luminaire Embroidery machines automatically allows areas of an embroidery design to be instantly transformed into appliqué.

- The three parts of the embroidery appliqué process are automatically generated with multiple options for stitching
- Multiple areas of an embroidery design can be transformed
- Extra stitching is eliminated when stitching is replaced with fabric
- Appliqué fabric adds an extra creative option for design
- Send the appliqué shape or shapes directly to Scan N Cut

Scan N Cut SDX325 and SDX330 are cutting machines with a built in scanner:

- Scan fabric (including your printed fabric) to perfectly place the cutting shape
- Both machines feature Auto Blade technology to make cutting easy

- Each machine has hundreds of built in transferable shapes to transform into appliqués AND embroidery designs

PrintModa Studio Fabric Printer will print 100% cotton fabric and can be used as a traditional printer as well:

- Use the Artspira app to print JPG photos on your mobile device
- Edit photos in your mobile device or import and image from other photo editing software on your computer
- Transform images into kaleidoscope-type creations to create your own fabric
- Up to 3 yards of 11" wide fabric can be printed at one time
- Built in designs in the Artspira app can be added to create photo collages for printing
- Use as a traditional printer to print paper or other fabric printing pre-cut sheets

CanvasWorkspace computer app communicates with Scan N Cut:

- Hundreds of ideas with cutting and embroidery files are available for multiple types of sewing and crafting projects
- Additional editing features are available for cutting files and the larger computer screen is easier to see
- Additional creative paper crafting options for the Scan N Cut can be purchased and added through Canvas Workspace such as foiling, piercing and embossing

Artspira app communicates with Scan N Cut, the embroidery machine and PrintModa printer:

- Hundreds of designs are available for all three machines.
- New designs and ideas are added monthly with Artspira magazine
- Premium Subscription is available with weekly designs, added features and designs.
